

Amendments to the Abstract:

Please replace the Abstract page on page 37 of the specification, with the following amended abstract.

Abstract:

The present invention is related to a steel composition intended to be used in a process including a cold rolling step, for the production of uncoated, electro-galvanised or hot dip galvanised TRIP steel products, the composition being characterised by a specific addition of phosphorus. The latter is added in order to reach the desired mechanical properties (high tensile strength in combination with high elongation) while keeping a good weldability by sufficiently reducing the carbon content. The invention is further related to a process for producing a steel product, and to the steel product obtained, said product having the composition of the invention.
